

AT Tool for 3DEXPERIENCE

Free Your Time to Innovate and Produce!

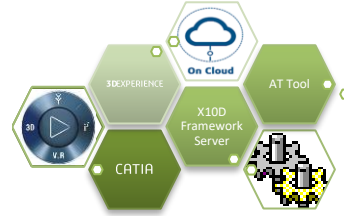

Attribute Tool for Quality

With X10Ds Attribute Tool you can customize your PLM data to fit your organizations needs and business rules exactly the way you want. Automate rules and attributes for lifecycle operations, saving your employees time while keeping your data safe, clean and in order. At X10D, we want you to “Do things right from the start and avoid expensive quality checks later in the process”.

MEET YOUR CUSTOMERS NEEDS

The customers today are savvy. They expect the product to be personalized to their own needs. Making a flexible design that can adopt to these needs is a must for product developing customers. Having the ability to work with product structures in an organized way, building the modularization thinking and following the regulations and requirements, becomes extremely complex for a design engineer working in a team.

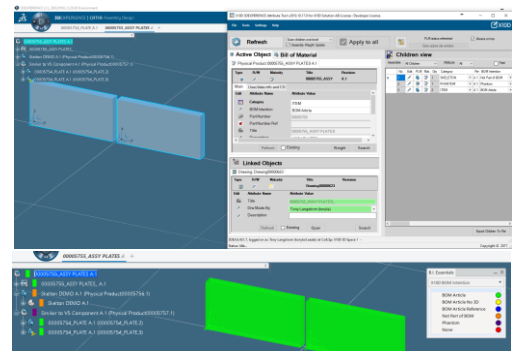

AT Tool helps you to handle these challenges with ease.

MASS ATTRIBUTE UPDATE IN NO TIME

Setting the right attributes when releasing a structure and follow the company standard can be a time-consuming process. Different sets of objects and corresponding properties are used in the same CAD model structure to define how they are used upstream and downstream in the design and manufacturing process and later consumed in various BOMs (MBOM, SBOM...).

AT Tool analyzes the structures and guides you naturally at the right moment to easily achieve results, following the right requirements, configurations, variants modularization and quality guidelines.

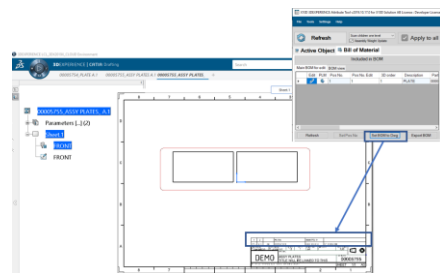

MAKE IT LEAN

X10D Quality Guide kicks in during design process and leads the user to what needs to be changed or updated according to the requirements and quality rules.

The users are getting help and guidance interactively during their work – not by a load of error messages in the last check, rather encouraging them to take the right path during the work.

AT Tool will help you to define and later develop the **Nucleus of Quality Know-how** and deploy it in a way that your co-workers will follow effortlessly.

BENEFITS

- Modular design.
- Requirements guide through the whole design process.
- Attributes for Skeleton and Interface parts, Bulk and Flexible parts Material and Weight management support.

What are X10Ds?

We have developed many "X10Ds" for our customers. These X10Ds are designed to accelerate the usage of existing tools and make the organization as effective as possible. This is done by automating repetitive tasks and securing information quality. These tools are sold as yearly subscriptions.

X10D is a company with the excellence in PLM and 3DEXPERIENCE that strives to get the most satisfied customers, by delivering the best support and most cost-effective implementation on the market. We work mainly with small and medium-sized companies and our goal is to increase the efficiency of the use of the 3DEXPERIENCE platform by adding our X10Ds to the solution.

We are X10D Solutions!
